Professional Experience

PMO & AI Automation Intern

06/2026 – 08/2026

Ingeniería y Calidad Sostenible, Oviedo, Spain

- Built a corporate Retrieval-Augmented Generation (RAG) system in Python for regulatory document analysis, combining BM25 lexical retrieval, Reciprocal Rank Fusion (RRF) and LLM-generated responses.
- Supported the automation and management of solar and wind energy projects through data-driven planning, tracking and reporting.

Bilingual AI Trainer

01/2026 – Present

DataAnnotation, Remote

- Designed advanced mathematical and scientific prompts to stress-test large language model performance across multi-turn conversations.
- Evaluated LLM outputs and datasets for factuality, consistency, localization and instruction following.

Research

Research Assistant

09/2026 – 12/2026

FERES – Fluids Engineering for Renewable Energy and Sustainability, University of Oviedo

- Developing a MATLAB predictive model for techno-economic assessment of the Levelized Cost of Energy (LCOE) of floating vertical axis wind turbines, modeling OPEX and lifecycle cost drivers for quantitative scenario comparison.

Selected Personal Projects

- **Early Fault Detection in Wind Turbines** (Python, pandas, scikit-learn) – Flags whether a component will fail within 14 days, based on sensor data of five turbines from an EDP onshore wind farm in Portugal.
github.com/diegotamargo/Wind-turbine-failure-predictor
- **Energy Mix & CO₂ Analysis** (R, SQL) – Loads Our World in Data energy and emissions records for 79 countries into a DuckDB pipeline, groups national fuel mixes into comparable profiles with k-means, and picks the CO₂ forecasting model for each country by testing candidates on years held out of training.

Education

Industrial Organization Engineering

09/2023 – Present

University of Oviedo, Gijón, Spain

- 180 ECTS taught in English, corresponding to three of four years. GPA 7.5 / 10.

Additional Education

- **IBM Data Science Professional Certificate** 08/2026
Coursera, 12 courses with a total workload of 180 hours. Python and SQL for data science, data analysis and visualization, machine learning, and a capstone project.
- **Machine Learning Techniques in MATLAB** 08/2026
MathWorks Training. Classification, regression, cluster analysis and dimensionality reduction.

Skills

Languages: Python (pandas, scikit-learn), SQL, R, MATLAB

Machine Learning: Classification, regression, clustering, feature engineering

Statistics: Hypothesis testing, time-series forecasting, optimization
